

byte ordering

consider int $x = \widetilde{0x01234567} = 0 \times 16^7 + 1 \times 16^6 + \dots = 19088743$ with pointer $\&x = 0x100$

indicates hex
byte 0110 0111

big endian (most significant byte first)

adress

value

	0x100	0x101	0x102	0x103	
...	MSB ↓ 01₁₆ 0000 0001	23₁₆ 0010 0011	45₁₆ 0100 0101	67₁₆ 0110 0111 ↓ LSB	...

little endian (least significant byte first)

adress

value

	0x100	0x101	0x102	0x103	
...	67₁₆ 0110 0111 ↓ LSB	45₁₆ 0100 0101	23₁₆ 0010 0011	MSB ↓ 01₁₆ 0000 0001	...

ARM chips can operate with both, iOS and Android use little endian.
